Jasper J.R., Link R.E., Chruscinski A.J., Kobilka B.K., Bern Primary structure of the mouse beta 1-adrenergic receptor g Biochim. Biophys. Acta 1178:307-309(1993).

C.-!- FUNCTION: BETA-ADRENERGIC RECEPTORS MEDIATE THE CATECHOL INDUCED ACTIVATION OF ADENYLATE CYCLASE THROUGH THE ACTIPROTEINS. THIS RECEPTOR BINDS EPINEPHRINE AND NOREPINEPH C PROTEINS. THIS RECEPTOR BINDS EPINEPHRINE AND NOREPINEPH APPROXIMATIVELY EQUAL AFFINITY.

C.-!- SUBCELIULAR LOCATION: Integral membrane protein.

C.-!- SUBCELIULAR LOCATION BY BETA-ADRENERGIC RECEPTOR KINASE.

C.-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTOR SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTOR MEDIAMENTAL PROCESSES AND ADDRENERGIC RECEPTOR KINASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

INUCTION: BETA-ADRENERGIC RECEPTORS MEDIATE THE CATECHOLAMINE-
INDUCED ACTIVATION OF ADENYLATE CYCLASE THROUGH THE ACTION OF G
PROTEINS. THIS RECEPTOR BINDS EPINEPHRINE AND NOREPINEPHRINE WITH
APPROXIMATIVELY EQUAL AFFINITY (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- PTM: HOMOLOGOUS DESENSITIZATION OF THE RECEPTOR IS MEDIATED BY ITS
PHOSPHORYLATION BY BETA-ADRENERGIC RECEPTOR KINASE (BY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the European Bioinformatics Institute. Can trigger the nuclear factor kappaB-pathway and can bind the cytoplasmic adapter molecule FADD/MORTI which engages initiator caspases such as caspase 8 leading to subsequent activation of effector caspases that execute apoptotic death of the cell.

SUBGURIT: Can interact with TRADD and RIP.

SUBCLLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: Widely expressed. High levels are found in spleen, peripheral blood leukocytes, small intestine and thymus, but also in K562 erythroleukemia cells, MCF7 breast carcinoma cells and activated T-cells.

SIMILARITY: CONTAINS 2 TNET-CYS REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pan G., O'Rourke K., Chinnalyan A.M., Genez R., Dixit V.M.;

"A novel polymorphism in the gene coding for the beta(1)-adrenergic receptor associated with survival in patients with heart failure.";

EUT. Heart J. 21:1853-1858(2000).

-i- FUNCTION: BETA-ADRENERGIC RECEPTORS MEDIATE THE CATECHOLAMINE-INDUCED ACTIVATION OF ADENYLATE CYCLASE THROUGH THE ACTION OF APROTEINS. THIS RECEPTOR BINDS EPINEPHRINE AND NOREPINEPHRINE WITH APPROXIMATIVELY EQUAL AFFINITY.

APPROXIMATIVELY EQUAL AFFINITY.

-i- SUBCELLULAR LOCATION: Integral membrane protein.

-i- PTM: HOMOLOGOUS DESENSITIZATION OF THE RECEPTOR IS MEDIATED BY 1 PHOSPHORYLATION BY BETA-ADRENERGIC RECEPTOR KINASE.

-i- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

POLITI'A ASSOCIATES THE GAMMA COMPLEX (COMPOSED OF CHAINS GAMMA, DELTA, DELTA', PAND CHI) AND WITH THE BETA CHAIN (BY SIMILARITY). SUBCELLULAR LOCATION: CYTOPIASMIC (BY SIMILARITY). SUBCELLULAR LOCATION: CYTOPIASMIC (BY SIMILARITY). BELONGS TO DNA POLYMERASE TYPE-C FAMILY. DNAE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: DNA POLYMERÁSE III IS A COMPLEX, MULTICHAIN ENZYME RESPONSIBLE FOR MOST OF THE REPLICATIVE SYMPHESIS IN BACTERIA. THIS DNA POLYMERASE ALSO EXHIBITS 3' TO 5' EXONUCLEASE ACTIVITY. THE ALPHA CHAIN IS THE DNA POLYMERASE (BY SIMILARITY). CATALYTIC ACTIVITY: N deoxynucleoside triphosphate - N diphospha
                                                                                                                                                                                                                                                                                                                     CPSGEVQ
                                                                                                                                                                                                                                                                                        CPSGEVQ

IN NEUROSCI. 19:1912-1921(1999).

11. FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARIETY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-11 GIVES RISE TO T-TYPE CALCIUM CURRENTS. T-TYPE CALCIUM CHANNELS BELOMG TO THE "LOW-OULTAGE ACTIVATED (LVA)" GROUP AND ARE STRONGLY BLOCKED BY NICKEL AND MIBEFRADIL. A PARTICULARITY OF THIS TYPE OF CHANNELS IS AN OPENING AT QUITE NEGATIVE POTENTIALS, AND A VOLTAGE-DEPENDENT INACTIVATION. T-TYPE CHANNELS SERVE PACEMAKING FUNCTIONS IN BOTH CENTRAL NEURONS AND CARDIAC NODAL CELLS AND SUPPORT CALCIUM SIGNALING IN SECROTORY CELLS AND VASCULAR SMOOTH MUSCLE. THEY MAY ALSO BE INVOLVED IN THE MODULATION OF FIRING PATTERNS OF NEURONS WHICH IS IMPORTANT FOR INFORMATION PROCESSING AS WELL AS IN CELL GROWTH PROCESSES. GATES IN VOLTAGE RANGES SIMILAR TO, BUT HIGHER THAN ALPHA 1G OR ALPHA 1H.

1. SUBCELLULAR LOCATION: Integral membrane protein.

1. TISSUE SPECIFICITY: BRAIN.

1. DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE PROBABLY REPRESSINT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.

1. POTM: IN RESPONSE TO RAISING OF INTRACELLULAR CALCIUM, THE T-TYPE CHANNELS ARE ACTIVATED BY CAM-KINASE II (BY SIMILARITY).

1. SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS FAMILY.

CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing 1,4-
linked D-glucose residues with release of D-glucose.

CATALYTIC ACTIVITY: Hydrolysis of terminal 1,4-linked alpha-D-
glucose residues successively from non-reducing ends of the ch
with release of beta-D-glucose.

SUBUNIT: MONOMER.

-!- FUNCTION: REQUIRED FOR CORRECT LOCALIZATION OF PRECURSOR PROTEINS BEARING SIGNAL PROTIDES WITH THE TWIN ARGININE CONSERVED MOTIF S/T-R-R-X-F-L-K. THIS SEC-INDEPENDENT PARHWAY IS TERMED TAT FOR TWIN-ARGININE TRANSLOCATION SYSTEM. THIS SYSTEM MAINLY TRANSPORTS PROTEINS WITH BOUND COFACTORS THAT REQUIRE FOLDING PRIOR TO EXPORT (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     TATA_RICPR STANDARD; PRT; 54 AA 692CJI.

                                  PTM: PHOSPHORYLATED (BY SIMILARITY).

MISCELLANEOUS: YEASTS CONTAIN 4 INDIVIDUAL SMALL RIBOSOMAL A
PROTEINS (RPA) WHICH CAN BE CLASSIFIED INTO TWO COUPLES OF SIMILAR
BUT NOT IDENTICAL SEQUENCES. EACH COUPLE IS DISTINCTLY RELATED TO
ONE OF THE TWO A PROTEINS PRESENT IN MULTICELLULAR ORGANISMS.
MISCELLANEOUS: RPA3 AND RPA4 ARE ESSENTIAL FOR CELL SURVIVAL,
WHEREAS RPA1 AND RPA2 ARE NOT.
